DETAILED ACTION

1. This communication is in response to Applicant's Amendment to Office Action dated April 22, 2004, faxed July 21, 2004.

1-1. Claims 6, 8, and 12 have been amended. Claims 1-12 are pending.

1-2. Claims 1-12 have been examined and allowed.

Reasons for Allowance

2. The following is an Examiner's statement of reasons for allowance:

2-1. The closest prior art of record discloses:

(1) A hierarchical test access port architecture for electronic circuits (Bhattacharya, U.S. Patent 6,378,090 B1);

(2) A method for debugging an integrated circuit using extended operating modes (Swoboda, U.S. Patent 5,828,824); and

(3) A format of a state inquiry message with synchronizing bits, 1 start bit, and followed by a predetermined number of data bits (Oh et al., U.S. Patent 6,037,868).

2-2. Independent claim 1 is directed at a method for emulation communications via a test data input port and boundary-scan architecture. This independent claim identifies the distinct combination of features of "supplying to the test data input port for communication to the boundary-scan architecture a serial signal having a number of bits greater in number than a number of bits of the serial connection of the plurality of registers, each bit of said serial signal having a first logic state" and "following supply of said serial signal, supplying to the test data

input port for communication to the boundary-scan architecture a single_start bit having a second logic state opposite to said first logic state followed by a predetermined number of data bits” as described in lines 17-30, page 18 of the specification and as shown in Figure 7. The closest prior art does not teach or reasonably suggest using the alternate data transfer protocol for communication to the boundary-scan architecture. Claim 1 and its dependent claims 2-5 are deemed allowable.

2-3. Independent claim 6 is directed at a digital electronic module. This independent claim identifies the distinct combination of features of each individual hardware component utilizing the alternate data transfer protocol as described in the specification in line 31 of page 18 through line 17 of page 19 and as shown in Figure 7 and Figure 8. The closest prior art does not teach or reasonably suggest using the alternate data transfer protocol in this specific digital electronic module. Claim 6 and its dependent claims 7-12 are deemed allowable.

3. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
